

# *The Dreaded* **Kennel Cough!**

**Common germs can be spread anywhere & everywhere!**

**FOR HUMANS:** child care centres, work, planes, shopping centres and don't forget the doctors surgery!

**FOR DOGS:** dog parks, water bowls, through your fence, daily walks, vet clinics, boarding establishments and of course at doggy day care.

## *The Facts*

It should not be life threatening, just uncomfortable and annoying. If in doubt, always seek veterinary advice.

We don't manufacture it at Hairy Hounds Playground, it's brought in by our gorgeous furry friends.

All of our dogs are vaccinated against it, but just like the flu, even after a flu shot we can still catch it .

Our centre is cleaned daily and we pride ourselves on our strict cleaning regimes.

## *The Signs*

Look out for: eye or nose discharge, a hacking cough, a cough that sounds like they've been pulling on their collar, if they seem lethargic or just 'off'.

**If you see ANY of these signs we ask you to call before you come down and discuss their symptoms. It's better to be safe than sorry!**

## *The Options*

Book in a solo walk with one of our carers. We'll even bring a home alone pack for environmental enrichment!!

**Ask us for more info.**
